Introduction

In order for MICE organizers to hold MICE events hereafter in safety and with peace of mind, the Japan Convention Management Association (JCMA) has formulated these MICE hosting guidelines to prevent the spread of the novel coronavirus (COVID-19).

The “Analysis of the Response to the Novel Coronavirus (COVID- 19) and Recommendations” issued by the Expert Meeting on the Novel Coronavirus Disease Control (hereinafter “Expert Meeting) on May 4, 2020, concluded as follows. “To prevent the infection from spreading at the same time as conducting socio-economic activities, it is especially necessary for businesses to consider and implement specific infection prevention measures in the scenes in which they provide each of their services. Because the risk of infection varies in each case, we would like each industry to create guidelines or other policies to prevent the infection from spreading and implement them by trial and error, using their ingenuity.”

In the midst of this situation, many organizers have contacted JCMA’s member companies seeking consultation about the hosting of events that have already been decided upon, and those that are proposed for the future. We at JCMA are concerned that without the formulation and observance of guidelines as sector standards, opportunities for MICE organizers to convene MICE events will not arise for the foreseeable future. Furthermore, since in the earliest stages of the spread of COVID-19 there were cases in which clusters occurred at MICE events aimed at the general public, we consider it vital that we share a common recognition of the necessity of both providing a sense of reassurance regarding MICE events and preventing such reoccurrences throughout the entire sector.

It is thus at this juncture that we wish to create guidelines for the hosting of conventions and other MICE events, establish safe and reassuring management methods as a sector organization and connect these with the resumption of MICE events. The countermeasures that we consider requisite are compiled herein in these Guidelines on Hosting MICE Events in the COVID-19 Pandemic.

The significance of hosting MICE events is covered later in this document, but we would be grateful if all those hosting MICE events, which play an important social and economic role, would use these guidelines and share them with operators, hosting facilities and all other stakeholders.

JCMA will aim for the earliest possible recommencement of MICE events, use this opportunity to endeavor to gain a broad understanding of the significance of hosting MICE events, and hope to function as a driving force in the post-COVID-19 society.

Please note that the content of these guidelines may be subject to revision when necessary according

to the latest knowledge on COVID-19, changes in the related policies/countermeasures, as well as the opinions of MICE organizers, operators and hosting facilities, and experience and knowledge obtained in the course of recommencing MICE events.

I. Significance and characteristics of the hosting of MICE events

- Creation of business and innovation opportunities
- Positive effects on local economies
- Improvement of national and urban competitiveness

Since they are events in which “people assemble,” MICE are regarded as events that lead to the exchange of knowledge and information, through which academic promotion and the creation of business opportunities, and in turn considerable economic effects and added values, such as urban branding, are all brought about. In fact, we are also proud to have also contributed to international peace by creating fora and chances for numerous participants to mingle regardless of nation, region, gender or age, and across all sorts of fields.

Business events are at the core of MICE

The vast majority of MICE events are regarded as business events to be participated in by business people, academics and stakeholders in each sector and academic field. BtoC events aimed at the general public also take place, but these guidelines are based on the premise of business-oriented events in which the participants are a specified audience.

One major feature of MICE as business events is that regardless of whether the participants are registered beforehand, on the event day or restricted to registered participants only, **it is possible for those hosting the events to ascertain the contact points for all participants.** This is in other words the decisive difference between MICE and types of businesses aimed at unspecified numbers of people, and **in the event of an emergency it is possible for all of the participants to be easily traced.** Furthermore, **through the use of IT tools** it is now realistic to attempt to **mitigate the risk of infection through contact and droplet infection.**

Based on the hosting guidelines it is now feasible for all of the operators and hosting facilities to host MICE events in safety and with peace of mind through the formulation and observance of suitable operational methods in line with the guidelines.

II. Identification of infection risks

The hosting of MICE events necessitates the consideration of countermeasure according to infection risks.

- **Closed spaces (poorly ventilated closed spaces)**
- **Crowded places (where large numbers of people are concentrated)**
- **Close-contact settings (where conversation and speaking take place in areas within arms' length of others)**

Places to which these three conditions (the so-called “three Cs”) apply are considered to be at high risk of spreading infection.

There is a need to avoid the occurrence of these conditions at all costs, and conduct measures to secure sufficient space between people (social distancing).

Furthermore, there is also a need to be thorough in preventing exposure of oneself as well as others to infection.

The expected infection risks in hosting MICE events are as follows.

II. 1. Contact infection risks

Identify the areas and frequency of commonly touched objects and doors. Particular attention is required regarding the following.

- Public spaces:
Tables, chairs, elevator buttons, escalator handrails, other handrails, toilets etc.
- Participant registration reception:
Cash, credit cards, ID cards, programs, congress bags etc.
- Cloakroom spaces:
Cloakroom tags/tickets, baggage deposited, etc.
- Session rooms:
Doors, tables, chairs, podiums, microphones, laptops, simultaneous interpretation receivers, etc.
- Party/social gathering rooms:
Doors, tables, chairs, tongs, cutlery, glasses, etc.
- Exhibition rooms:
Exhibit booths stands, exhibit materials, explanatory material provided by exhibitors, etc.

II. 2. Droplet infection risks

Identify the extent to which space between people can be secured, while taking into account the state of ventilation in the hosting room.

At the same time, it is also important to make provisions so that participants can communicate with each other while retaining an appropriate distance between themselves. In the case of MICE in particular, since it is vital to pay attention to the transmission of infection through conversation and

speaking, the wearing of masks that are effective in the restriction of infection via airborne transmission of droplets floating in the air (micro-droplet infection) is imperative.

- Public spaces:
The distance between specified numbers of participants at crowded times
- Participant registration reception:
Queues while waiting, distance between operational staff and participants
- Cloakroom spaces:
Queues while waiting, distance between operational staff and participants
- Session rooms:
Queues during entrance and exit, audience seating layout, distance between speakers, distance between speakers and participants, state of ventilation, etc.
- Parties/social gathering rooms:
Table layout, seating order, content of attractions and situations in which people speak in loud voices, distance between participants in the event of standing buffets, state of ventilation.
- Exhibition rooms:
Distance between exhibitors and participants during business talks, distance between exhibitors and participants during explanations given at booths, layout of booths, width of aisles, etc.

II. 3. Participant attraction measure risks

Identify around how many participants are expected, and bearing in mind both the number of participants and the capacity of the room, identify **whether or not safe distances between people can be secured**. In addition, since a certain number of people will lead to congestion for some time, there is a heightened requirement for ventilation.

In consideration of the above, **identify the number of participants that can be accommodated throughout the entire facility and each room used**, which is the criterion for assessing the **restrictions on entering the room**. This also ties in with the **rough target for the gradual easing of hosting restrictions** indicated by the government concerning MICE, including events and exhibitions, and the accompanying **easing of the ceiling placed on capacity ratios and numbers of people**.

III. Safety measures for participants

III. 1. Planning and preparation stages of MICE events

III. 1. 1. Formulation of infection countermeasures by stakeholders

- (1) **The sharing of roles and scope of responsibilities should be decided between the organizers, operators and hosting facilities, shared among stakeholders and the responsibilities of each**

organization determined.

- (2) **Stipulate the criteria and process for deciding whether an event should be postponed, cancelled, or held online.**
- (3) The businesses and organizations that host MICE events are highly varied, and there is a need to utilize the new technology and systems/skills of these businesses and organizations at the stage of formulating the implementation plan in order make good use of them in preventing the spread of infection.
 - ▶This may include for example, **mechanizing the reception desks or making them unmanned, cashless payments, the introduction of prior reservation systems for programs, and the joint-use of mechanisms such as online/virtual hosting.**
 - ▶It is to be hoped that stakeholders will be flexible in considering the actual type, scale and budgets of events to be held.
- (4) With regard to guest speakers invited from outside of Japan, in accordance with the latest information on restrictions on entry to Japan, respond flexibly by **switching to online presentations**, etc.
- (5) In preparation for emergencies, make sure to ascertain the public health center and medical institutions in whose jurisdiction the MICE event is held.

III. 1. 2. Announcements to the public

Organizers planning to convene MICE events are requested to proactively make announcements about the various measures being taken to prevent the spread of the COVID-19 infection to the participants and the host community.

Doing so, in tandem with requests to participants to cooperate pursuant to the hosting guideline decisions mentioned above, will tie in with the promotion of understanding towards the hosting of MICE events on the part of the hosting communities by transmitting information to them about the fact that events will be operated safely and securely.

- (1) **With regard to the content of initiatives taken by the organizers to prevent the spread of infection and the accompanying matters to be observed by participants, the following information should be relayed at the earliest stage prior to hosting** through the official website and social media, etc.
- (2) **Indicate the criteria for self-restraint concerning visiting the rooms**
 - a) In the case that a participant has a fever, or other symptoms such as coughing or vomiting.
 - b) Cases in which participants have, within the previous 14 days, visited a nation where infection is continuing to spread.
 - c) In the case that a participant turned out to have been in close contact with a COVID-19 infected person.
 - d) In the case that a participant has been in close contact within the previous 14 days with a traveler from or resident in a country or region subject to entry restrictions.
- (3) Be thorough in the basic infection countermeasures of keeping a **social distance from others**,

wearing a mask and washing hands as recommended by the Expert Meeting, and **request the cooperation of participants in these efforts.**

- (4) **Request cooperation and encourage understanding concerning implementation of measures to prevent the spread of infection** before, during and after MICE events.
 - ▶Specifically, **this includes the registration of participant information; temperature reading before room entry; cooperation with operational rules including securing of social distancing, adhering to directional signage inside rooms and during entry/exit processes; cooperation in post-event questionnaires (when necessary); and understanding with regard to changes in details of various services compared to standards in normal times.**
- (5) **Consider the use of the recently developed COVID-19 Contact-Confirming Application (COCOA)**, and give prior notice in case it will be used.
- (6) Provide the latest information on restrictions on entry to Japan that are in place as a part of the Japanese government's "New measures to strengthen border measures," such as the Ministry of Foreign Affairs' website.

III. 2. During MICE events

MICE events are varied in terms of theme, participants' attributes, scale of event and hosting facility, and therefore require responses tailored to the circumstances of their hosting.

In response to the fact that the Expert Meeting's recommendations on "a new lifestyle" also stated that **the distance between people should as far as possible be kept at two meters (or a minimum of one meter)**, countermeasures shall be taken that include consideration of the scale of the event and size of the rooms.

The following are measures that should be referred to by organizers and operators in order to preserve the safety of participants in the main situations occurring when MICE events are held.

III. 2. 1. Participant registration reception

- (1) In addition to requesting participants **to have their temperatures' read before entering the rooms**, the **criteria for self-restraint concerning visiting the rooms** (mentioned above) should be publicized on the official website of the event, and clearly indicated at the entrances to the hosting facility.
- (2) By following the procedures detailed below, the distance between the participants queuing at the reception desks **should be kept to a minimum of one meter.**
 - a) **Restrict the number of people who can enter the rooms at one time.**
 - b) Devise the structure of the event program (by, for example, staggering starting/finishing times when several rooms are used), **to split up the timing of arrival at the rooms.**
 - c) **Use floor markers etc.** to guide participants, **and secure distance between people.**

- d) **Station guide staff**, who will manage the execution of the above and request the cooperation of participants.
- (3) In order to deal with people who are running a temperature upon entering the rooms **situate an isolation zone near the entrance/exit**. In addition, **using temperature reading equipment (thermography etc.) and the stationing of staff with non-contact thermometers**, swiftly guide those with temperatures over a certain level to the isolation zone, contact medical institutions and follow their instructions.
 - (4) At the participant registration reception desk (or via prior participant registration) **ascertain all participants' names, affiliations, telephone numbers and e-mail addresses, etc.**, and implement measures **to enable the tracking of people** if necessary. **Give prior notice** to participants that in the event that it is necessary the above information may be provided to public bodies such as public health centers.
 - (5) **In order to reduce the handling of cash to the maximum extent possible**, examine the introduction of prior participant registration and cashless payments.
 - (6) In order to reduce the chances of direct contact between reception staff and participants during reception hours and congestion around the reception area to the maximum extent possible, it is recommended that **technology such as tablet terminals and others is used**.
 - (7) Request participants to **wear masks, observe coughing/sneezing etiquette, and wash and disinfect their hands and fingers**. **Maintain a certain amount of masks at the participant registration reception desk** in case people come without a mask.
 - (8) **Also consider trying the use of acrylic panels and transparent vinyl curtains** in order to shield participants and staff from each other.
 - (9) **The staff at the participant registration reception desk must wear masks**. Also consider the use of face shields, and maintain appropriate spaces between staff.
 - (10) As a countermeasure against heat stroke, on summer days when the temperature and humidity are high it is permissible for participants and operational staff to remove their masks when outdoors as long as sufficient distance between them can be assured (two meters or more).
 - (11) **Avoid the passing out by hand** of congress bags, pamphlets, leaflets and questionnaires etc., and **request the participants to collect such items themselves**. The digitization of paper media is desirable.

III. 2. 2. Cloakroom spaces

- (1) Ask participants to look after their own hand baggage as much as possible, and in the event that cloakrooms are set up consider the use of **acrylic panels and transparent vinyl curtains** as at the registration reception desks.
- (2) **Staff at cloakroom spaces should wear masks and gloves**, and wash their hands at frequent intervals. Also consider the use of face shields.

III. 2. 3. Session rooms

- (1) As far as it is possible **select session rooms in which physical distance between participants can be maintained**, according to the expected size of the audience.
 - ▶Request the hosting facility to calculate the number of people who can be accommodated while securing the minimal distance between them, and share this information with the organizers.
- (2) With regard to the use of seating, in order to secure distance between people, **if the seating is moveable then the space of at least one seat should be left vacant on either side and to the front and rear of occupied seats**; if the seating is fixed in halls etc., **one row before and behind should be left vacant**.
- (3) The use of standing room should in principle be prohibited.
- (4) During panel discussions adequately secure the **distance between speakers, and between speakers and audience (as far as possible keep it at two meters (or a minimum of one meter))**. In the event that such distance cannot be secured, also consider the installation of acrylic panels around the speakers.
- (5) At the room entrance implement **restrictions on the number of people who can enter**, and prevent the session room from becoming a crowded place.
- (6) Assume there may be cases in which not all participants can enter the session room, and consider establishing **a room where the proceedings can be watched via live broadcast**.
- (7) Clearly **separate the entrances and exits to the room**, lay appropriate directional floor markers so that those entering and those exiting do not intermingle between sessions, and use clear notification signage throughout the room.
- (8) Take measures at **room entrances such as providing liquid or gel hand disinfectant**.
- (9) As far as possible **leave open two doors at the entrance/exit, etc. and strive to keep the room well ventilated**.
 - ▶In the event that ventilation is difficult due to the structure of a room, **consider the installation of a device such as a circulator**.
 - ▶Since some doors will be kept open, endeavor to give directions in order to maintain silence in the corridors, lobby and areas around the session room.
- (10) **With regard to jointly used items and equipment such as microphones, strive to frequently disinfect or change them, and consider the introduction of alternative technologies such as chat systems** for Q&A from the floor.
- (11) **Avoid the passing out by hand** of pamphlets and other material and **request the participants to collect such items themselves**. The digitization of paper media is desirable.
- (12) Prepare an in-venue network and Wi-Fi environment for the downloading of electronic media.
- (13) Before the start of sessions **use the screen to notify and make participants aware of infection prevention measures etc.**
- (14) **Items lent to participants such as simultaneous interpretation receivers** should be sterilized in advance, and their use must be withdrawn in the event that they cannot be adequately

sterilized. It is therefore necessary to ensure an adequate amount of such items is secured.

▶Also **consider the introduction of simultaneous interpretation systems that can be listened to by participants on their own smartphones or tablets.**

- (15) In the event that a poster session area is set up within the exhibition site, follow the measures in III.2.4. “Jointly organized exhibitions.” It should be noted that in order to minimize face-to-face talks, digital Q&A methods should be considered, including electronic posters.

III. 2. 4. Jointly organized exhibitions

Exhibitions held jointly with conventions:

- (1) If the room is also the exhibition room, **the move-in and move-out entrance should be partially opened** to create an air flow.
- (2) During the exhibition period, at the end of each day the **aisles and common areas should be disinfected where necessary.**
- (3) The **state of crowding in the rooms should be frequently monitored**, and in the event that it is judged that adequate space between participants cannot be secured (**as far as possible it should be kept at two meters (or a minimum of one meter)**), **entry should be restricted.**
- (4) Request exhibitors to conduct **measures to prevent contact infection from exhibits** (by frequently disinfecting them and prohibiting anyone from touching them without permission).
- (5) Request exhibitors **to avoid handing out explanatory material and request the participants to collect such items themselves.** Alternatively, request them to make every effort to provide material in electronic format. Request that all computer terminals/devices are frequently disinfected.
- (6) Request exhibitors to ensure **those providing explanations wear masks, and consider the use of face shields, etc.**
- (7) Request exhibitors to **allow for more space than usual when planning the booth design.**
- (8) Request exhibitors to **refrain in principle from providing food/drinks in booths**, and if provided ensure the same care as in parties and social gatherings is paid.
- (9) With regard to the setting up of exhibition booths and the operations within the room, **refer to the guidelines of the applicable industry organization such as Japan Exhibition Association.**

Please note that if associated events involving the participation of local people are hosted, it is highly desirable that **the policies and guidelines of the local government where the events are held and related organizations are referred to.**

III. 2. 5. Party and social gathering rooms

The purpose of the parties and social gatherings hosted in tandem with MICE events is not simply to eat; they are opportunities for networking between participants, which could be described as an important purpose of hosting physical MICE events. However, since masks are removed while eating and drinking and the risk of the spread of infection is heightened there is a need for various measures to minimize that risk.

- (1) In the event that parties or social gatherings where food and drinks are served take place, as is the case with the session rooms, **rooms of a size in which physical distance between participants (as far as possible it should be kept at two meters (or a minimum of one meter)) can be maintained must be selected** according to the number of expected participants, and care taken to ventilate them.
- (2) Adopt a **prior registration system** in order to ascertain the number of participants.
- (3) Where possible, consider **shortening the time of these events or using outdoor spaces**.
- (4) In order to secure distance between people, **consider refraining as much as possible from stand-up meal formats and use a seated service format**.
- (5) **When using a seated service format, secure distance between tables and seat people at tables in numbers** that maintain distance between people.
- (6) Make every effort **to avoid buffet formats** in which large numbers of people take food from the same serving dishes, and **implement individual provision of pre-packed food or lunch boxes etc.**
 - With regard to the provision of lunch boxes, consider measures such as asking participants to take them to the table themselves rather than handing them out.
- (7) When standing networking is conducted, notify participants in advance to wear masks and **communicate with each other while maintain physical distance**, using notices and in-room announcements.
- (8) Another option is to provide networking time at a separate room prior to meals.
In such cases, remind participants to wear masks, design a layout that will avoid crowding, and request that conversation during meals be kept to an absolute minimum.
- (9) Secure an **adequate distance between participants and stages (as far as possible it should be kept at two meters or more)** where greetings are given or entertainment presented. Refrain from presenting entertainment that involves the entertainers speaking in loud voices.
- (10) Consider the use of **radio system equipment** in order to secure distanced between interpreters and participants in the event that whispered interpreting is used in the event that whispered interpreting is used.

III. 2. 6. Public spaces (foyers and general directional routes, etc.)

- (1) Envisage beforehand events, times of the day and places in which crowding is expected, use floor markers and partitions etc., take steps to **avoid concentrations of participants in queues** and so on within certain areas, and when necessary implement **restrictions on the number of people**.
- (2) In cases in which multiple events are being held on the same day at a room, coordinate beforehand as it will be necessary to segregate the registration reception desks and separate the resultant directional routes and queues.
- (3) Particular care is necessary in the event of the operation of shuttle buses and so on in which large numbers of participants will become concentrated.
- (4) **Directional guidance** provided by the operational staff should be given **using a megaphone**, etc.

in order to prevent speaking in a loud voice.

- (5) Identify the places and times that participants are likely to gather, and take steps to disperse them (for example, positioning guidance staff in such areas).
 - ▶During break times in particular, people become concentrated in places such as restrooms, so devise the structure of the event program in order to achieve the dispersion of crowds.
 - ▶The event should in principle be non-smoking, and indoor smoking areas at facilities closed.
- (6) Use signboards, etc. in appropriate parts of the room to post notices requesting the cooperation of participants in measures regarding the prevention of the spread of infection.

III. 2. 7. Emergency responses

- (1) Enact **measures to deal with the occurrence of participants or operational stakeholders who are suspected of being infected.**

It is essential to establish a designated first-aid office, prepare the requisite equipment/supplies, and **discuss and make a manual on response procedures with the hosting facility.**

- a) If a participant or operational stakeholder shows symptoms of possible infection **swiftly isolate them in the first-aid office.**
- b) **Staff responding must wear masks, gloves, face shields and if possible gowns.**
- c) Swiftly contact a medical institution and follow the instructions given.
- d) Be thorough in washing hands before and after dealing with such occurrences.

III. 3. After events

- (1) If a participant or operational stakeholder is suspected of being infected, **cooperate with any questioning by public institutions such as public health centers, and provide them with the requisite information.**

▶Pursuant to the information acquired on participants, share the information with participants who may have come into close contact with the infected person, and advise them to seek medical diagnosis in the event that they are displaying any symptoms suggestive of infection.

- (2) Note that from the perspective of protecting personal information, **adequate measures to store the list of participants must be taken.** For the foreseeable future, it should be stored for at least one month.

IV. Safety of operational stakeholders

- (1) **Before starting work, take temperatures and check for any noticeable symptoms, summarize them to the persons responsible for operations and keep a record.**

Stipulate in advance the **contact and decision-making process** for the occurrence of people displaying symptoms suggestive of infection, and take measures such as **requesting**

operational stakeholders to wait at home.

Also request them to wait at home in the case that they turned out to have been in close contact with a COVID-19 infected person, and that they have been in close contact within the previous 14 days with a traveler from or resident in a country or region subject to entry restrictions.

- (2) Ensure thoroughness in **hand-washing and disinfecting of hands and fingers** when staff check-in for work, when they commence the duties at each position they are in charge of, and after using toilets.
- (3) **All operational stakeholders must wear masks.**
- (4) The **registration reception desk and cloakroom staff**, who are at a higher risk of direct infection, **should wear gloves**. Also consider the use of face shields.
- (5) Calculate the requisite number of operational staff for the safe and anxiety-free operation of the event, and **devise job rotation schedules**.
- (6) With regard to work, take the necessary steps to maintain health such as ensuring **appropriate breaks and rehydration**.
- (7) As a countermeasure against heat stroke, those working outside on hot and humid summer days may, as long as adequate distance between people can be secured (two meters or more), may remove their masks.
- (8) **Liquid hand and finger disinfectants** should be placed at points where people who are handling cash and participants' baggage but cannot frequently wash their hands are stationed.
- (9) All operational stakeholders should be aware of their social responsibilities and **ascertain the state of their own health**.
- (10) Encourage each and every member of the operational staff to maintain their health by **eating a sufficiently nutritious diet and taking adequate sleep**.
- (11) Manuals for operation staff should strive to **improve their literacy concerning safe and anxiety-free operations** by including the "Points to be noted about the guidelines for preventing the spread of infection in each industry" contained in the Expert Meeting's Analysis of the Response to the Novel Coronavirus (COVID-19) and Recommendations (May 4, 2020).

V. Matters to be requested of the hosting facilities

In order to enable MICE events to be operated safely and free from anxiety for participants, organizers and all operational stakeholders, the cooperation of the hosting facility should be asked for and close collaboration with the facility conducted.

- (1) Consultation between hosts and stakeholders

Preparatory meetings on the hosting of the event should be held between the organizers and operators.

In particular, if multiple events are being hosted on the same day at the same facility, separate

- the location of registration reception desks, routes and queues.
- (2) Increase the **frequency of cleaning and disinfecting** within the facilities, and make a particular effort to remove all items that people are likely to come into contact with often.
 - (3) In order to enable visitors and operational stakeholders to disinfect their hands, place hand and fingers **disinfectant** around entrances and in easily reachable places (after touching door knobs etc.) and in restrooms.
 - (4) **Temperature-reading equipment (thermography devices, etc.) and non-contact thermometers should be installed.**
 - (5) Regularly disinfect items, places and materials that unidentified numbers of people are likely to touch such as tables in rest areas, chairs and touch-screen panels.
 - (6) Disinfect all the materials and equipment loaned out by the facility at the end of each day (microphones, podiums and moderator's desks, etc.)
 - (7) **Air circulation** in the facility
Use the air circulation and ventilation systems of the facilities to let in fresh air.
 - (8) Prevention of closed spaces and infection dispersion
In order to prevent closed spaces and poorly ventilated spaces and places where people gather in crowds, **close the smoking area.**
In order to prevent dispersion, **switch off the hand-driers in restrooms.**
 - (9) **The facility staff must wear masks.**
 - (10) Checking medical institutions and public health centers
In order to enable swift collaboration in the case that a participant suspected of being infected emerges during the MICE event, **check the contact numbers of the nearest medical institutions and the public health center with jurisdiction over the site.**
 - (11) **Establishment of first-aid office**
Secure a place where participants suspected of being infected or with health problems can temporarily stay.

VI. Matters to be requested of hosting local governments and convention bureaus

Obtain **an understanding of the fact that when MICE events are hosted participants will come from other prefectures and other nations.**

In addition, with regard to the operation of safe and anxiety-free MICE events, request **cooperation and support as the hosting site**, including fostering interest in the event.

Furthermore, if the local government has its own guidelines, seek to **coordinate them with these guidelines** and ask for their understanding in avoiding any disagreement about operational methods.

VII. Creation of a verification and collaboration system

JCMA will pursue the following initiatives in order to ensure that all hosts can convene MICE events in safety and peace of mind.

- **JCMA will compile examples of cases** in which it is deemed that its members have contributed to the safe and anxiety-free operation of MICE events, as well as cases in which there was a need to reconsider the way that a MICE event was operated.
- When necessary, **information will be provided to members**, and ongoing efforts will be made to improve and standardize the operational knowhow of members, and their sustained awareness of infection countermeasures.
- **JCMA will put forth efforts to share information through collaboration with other MICE-related organizations.**

This information will from now on **be accumulated as operational methods that can contribute to the hosting of safe and anxiety-free MICE events, and will be reflected in future revisions made to these guidelines.**

Revision history

1st edition issued on June 23, 2020

2nd edition issued on July 6, 2020
